DETAILED ACTION

Allowable Subject Matter

1. Claims 1-27 are allowed.
2. The following is an examiner's statement of reasons for allowance:

The present invention features a circuit having a hardware-based adaptive differential pulse code modulation (ADPCM decoder).

Closed related prior art teaching similar correlating features, including:

JP 09074377 A (Miyamoto) teaching demodulated ADPCM codes are inputted to a feature extraction device and features of voice information are extracted by the feature extraction device, the ADPCM codes feature-extracted and replaced through the feature extraction device are decoded to PCM signals by an ADPCM decoder, the feature information of the voice extracted by the feature extraction device, the information of several frames are stored in a memory and the information stored in the memory is read in every constant cycle and updated as required.

US 5,764,941 (Goto et al) teaching Operating circuit and operating method for processing signals in ADPCM system sequentially carrying out calculations according to the command codes in a command ROM, wherein the operating circuit comprising the command ROM (read only memory) for storing a content of a program, a program counter for appointing an address to said command ROM, a command decoder for decoding a content of said command ROM appointed by said program counter.

However, none of the prior art of record teaches or suggests the features of the claims taken in light of the specification, specifically:

a memory storing both programming instructions and ADPCM encoded source file data; and
a micro-controller having an architecture that implements time multiplexed memory addressing wherein ADPCM encoded source file data is extracted from the memory and delivered to the ADPCM decoder for processing in a first cycle, and wherein programming instructions are extracted from the memory and executed by the micro-controller in a second cycle while the hardware-based ADPCM decoder continues processing of the previously extracted ADPCM encoded source file data.

These features recited in the independent claims 1, 11, 15, and 21 render the claims allowable. Dependent claims 2-10, 12-14, 16-20, and 22-27, further limiting the dependent claims, are allowable for the reasons as noted above.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
